

ION DETOXIFIER

We live in a very toxic environment. The result is that tissue acid wastes, chemical and heavy metal residues build up in the body faster than ever before resulting in a higher incidence of disease. These toxins can break out in rashes, dark circles under the eyes, swollen joints and blotchy complexions, to name a few.

The Ion Cleanse detoxifies the body gently and effectively with little or no stress, and provides a comfortable and relaxing way to rid the body of toxins. A series of Ion Cleanse sessions, along with a healthy lifestyle, have been shown to substantially reduce and even eliminate these conditions and help you maintain health and wellness.

Increased energy, clear thinking, increased metabolism, a decrease in inflammation and relief of aches and pains in joints and gout are some additional ways that Ion Cleanse sessions help activate the body's own ability to heal itself

How Does The Ion Cleanser Work?

An ion is a charged atom that has gained or lost an electron, and creates a magnetic field capable of neutralizing oppositely charged particles. These neutralized particles are pulled out of the body through the skin via a process called osmosis, or the movement of the particles through a membrane, from a

lower concentration to a higher concentration. In this case, the higher concentration is the ion field set up by the array in the water.

The array goes into the water with the feet. The metals within the array, in combination with the water and salt generate positively or negatively charged ions by separating the water into oxygen and hydrogen.

These ions create an osmotic field that pulls neutralized toxins out of the body through that portion of the skin that is in contact with the water.

When the ion cleanser is set on positive, the current is directed to the positive pole in the array and results in negative ions being produced in the water which it is believed raises the blood pH from acidic to alkaline. When it is set on the negative ion field the current is on the positive pole and creates positive ions. It lowers the blood pH from alkaline toward acidic

What to Expect with each Ion Cleanse Session

Each session takes approximately 30-40 minutes. Feet are placed in warm water along with the Ion array and mineral salt. Then all you do is Relax! Within seconds the Ion array begins neutralizing and removing toxins and the water color begins to change colors.

Following the Ion Cleanse session you will be given liquid minerals to replace those that may have been pulled out during the session. Your body may feel lighter after even the first session. You may think more clearly, have increased energy and feel a greater sense of well-being.
